IN THE CLAIMS

1. (Currently Amended) A wireless device comprising:
   pairing information for **[[**the**]]** a first wireless device wherein said pairing information comprises a first unique encryption key;
   pairing information for **[[**another**]]** a second wireless device wherein said pairing information comprises a second unique encryption key;
   a processor coupled to the first wireless device;
   a speaker coupled to the processor to communicate audible signals; and
   logic which, ~~when applied to~~ in communication with the processor, converts the pairing information for the **[[**other**]]** second wireless device to audible signals~~, and communicates the audible signals~~ to be communicated via the speaker.

2. (Currently Amended) The wireless device of claim 1 further comprising:
   logic which, ~~when applied to~~ in communication with the processor, performs acts defined by the pairing information for the wireless device.

3. (Currently Amended) The wireless device of claim 2 further comprising:
   logic which, ~~when applied to~~ in communication with the processor, synchronizes the acts defined by the pairing information for the wireless device with the communication of the audible signals via the speaker.

4. (Original) The wireless device of claim 1, the pairing information comprising a pairing code common to a model of the wireless device.

5. (Original) The wireless device of claim 1, the pairing information comprising a pairing code specific to the wireless device.

6. (Currently Amended) The wireless device of claim 1, wherein the logic converts the pairing information for the **[[**other**]]** second wireless device to DTMF tones ~~and communicates the DTMF tones~~ to be communicated via the speaker.

7. (Currently Amended) A wireless device comprising:

a ~~microphone~~ processor;

a ~~processor~~ microphone coupled to the processor; and

logic which, ~~when applied to~~ in communication with the processor, converts signals produced by the microphone into control signals~~, and applies the control signals~~ to effect pairing of the wireless device with **[[**another**]]** a second wireless device.

[[9**]]**8. (Currently Amended) The wireless device of claim**[[**8**]]** 7 further comprising:

logic which, ~~when applied to~~ in communication with the processor, synchronizes the application of the control signals with pairing of the **[[**other**]]** second wireless device.

[[10**]]**9. A wireless device comprising:

a processor;

a speaker coupled to the processor to communicate audible signals; and

logic which, ~~when applied to~~ in communication with the processor, identifies **[[**another**]]** a second wireless device to a network, receives pairing information for the **[[**other**]]** second wireless device from the network, and converts the pairing information for the **[[**other**]]** second wireless device to audible signals~~, and communicates the audible signals~~ to be communicated via the speaker[[.]], said pairing information comprising a unique encrypted key.

[[11**]]**10. (Currently Amended) The wireless device of claim **[[**10**]]** 9 further comprising:

logic which, ~~when applied to~~ in communication with the processor, performs acts defined by pairing information for the wireless device.

[[12**]]**11. (Currently Amended) The wireless device of claim **[[**11**]]** 10 further comprising:

logic which, ~~when applied to~~ in communication with the processor, synchronizes the acts defined by the pairing information for the wireless device with the communication of the audible signals via the speaker.

[[13]]12. (Currently Amended) The wireless device of claim **[[**10**]]** 9, the pairing information comprising a pairing code common to a model of the wireless device.

[[14]]13. (Currently Amended) The wireless device of claim **[[**10**]]** 9, the pairing information comprising a pairing code specific to the wireless device.

[[15]]14. (Currently Amended) The wireless device of claim **[[**10**]]** 9, wherein the logic converts the pairing information for the **[[**other**]]** second wireless device to DTMF tones ~~and communicates the DTMF tones~~ to be communicated via the speaker.

[[16]]15. (Currently Amended) A wireless device comprising:

a ~~microphone~~ processor;

a ~~processor~~ microphone coupled to the processor; and

logic which, ~~when applied to~~ in communication with the processor, converts pairing information comprising signals produced by the microphone into speech signals, communicates the speech signals to a network, and receives from the network control signals corresponding to the speech signals ~~from the network, and applies the control signals~~ to effect pairing of the wireless device with [[another]] a second wireless device.

[[17]]16. (Currently Amended) The wireless device of claim **[[**16**]]** 15 further comprising:

logic which, ~~when applied to~~ in communication with the processor, synchronizes the application of the control signals with pairing of the other device.

[[18]]17. (Currently Amended) A method for secure communication between wireless devices, comprising:

converting, in a first wireless device, [[converting]] pairing information for a second wireless device into audible signals;

communicating from the first wireless device [[communicating]] the audible signals to the second wireless device;

~~the second wireless device~~ converting the audible signals into control signals at the second wireless device; and

~~the second wireless device~~ applying the control signals to the second wireless device to effect pairing with the first wireless device.

[[19]]18. (Currently Amended) The method of claim [[18]] 17 further comprising:

~~the second wireless device~~ applying speech recognition logic to produce the control signals at the second wireless device.

[[20]]19. (Currently Amended) The method of claim [[19]] 18 further comprising:

~~the first wireless device~~ communicating synchronization signals from the first wireless device to the second wireless device to synchronize pairing of the first and second wireless devices.

20. (Currently Amended) A method for secure communication between wireless devices, comprising:

~~a first wireless device~~ receiving from a network, to a first wireless device, pairing information for a second wireless device;

~~the first wireless device~~ communicating the pairing information as audible signals from the first wireless device to the second wireless device; and

~~the second wireless device~~ converting the audible signals into control signals at the second wireless device to effect pairing of the second wireless device with the first wireless device.

21. (Currently Amended) The method of claim 20 further comprising:

~~the second wireless device~~ applying speech recognition logic to convert the audible signals into control signals at the second wireless device.

22. (Currently Amended) The method of claim 20 further comprising:

synchronizing the pairing of the first and second wireless devices ~~pairing with the second wireless device in synchronization~~ with the communication of the audible signals.

23. (Currently Amended) A method for secure communication between wireless devices, comprising:

~~a first wireless device~~ receiving from a network, to a first wireless device, pairing information for a second wireless device;

~~the first wireless device~~ communicating the pairing information as audible signals from the first wireless device to the second wireless device; and

~~the second wireless device~~ applying speech recognition logic at the second wireless device to convert the audible signals to control signals which, when applied to the second device, effect pairing of the second wireless device with the first wireless device.

24. (Currently Amended) The method of claim 23 further comprising:

synchronizing the pairing of the first wireless device and the second wireless device by exchanging signals ~~to synchronize pairing of~~ between the first and second wireless devices.

25. (Currently Amended) A method for secure communication between wireless devices, comprising:

~~a first wireless device~~ receiving audible signals to a first wireless device from a second wireless device;

~~the first wireless device~~ converting the audible signals to speech signals and communicating the speech signals to a network;

~~the first wireless device~~ receiving from the network control signals corresponding to the speech signals; and

~~the first wireless device~~ applying the control signals to the first wireless device to effect pairing with the second wireless device.

26. (Currently Amended) The method of claim 25 further comprising:

~~the first wireless device~~ exchanging signals between the first and ~~with the~~ second wireless devices to effect pairing.

27. (Currently Amended) The method of claim 26 further comprising:

~~the second wireless device~~ receiving from the network, to the second wireless device, pairing information for the first wireless device; and

~~the second wireless device~~ communicating the pairing information to the first wireless device as the audible signals.

28. (Currently Amended) A method for secure communication between wireless devices, comprising:

converting in a first wireless device ~~converting~~ pairing information for a second wireless device into audible signals;

~~the first wireless device~~ communicating the audible signals to a ~~human~~ subscriber;

~~the human providing~~ prompting the subscriber for inputs corresponding to the audible signals to the second wireless device;

~~the second wireless device~~ converting the inputs into control signals at the second wireless device; and

~~the second wireless device~~ applying the control signals to the second wireless device to effect pairing with the first wireless device.

29. (Original) The method of claim 28, the pairing information comprising a pairing code common to a model of the wireless device.

30. (Original) The method of claim 28, the pairing information comprising a pairing code specific to the wireless device
